

subdivisions along existing roads should not be allowed. New development should be designed to minimize the number of vehicular access points to existing collector or other through roads. This designation is considered to be provisional for areas that are currently zoned Agriculture/Resource Protection – in this situation the current Ag/RP zoning or its equivalent should remain in place until a planned development proposal is under active consideration by the property owner.

Allowed Uses – The following general types of uses should be allowed as part of a planned development in the Medium Density Planned Residential Development District:

- detached single family and two-family homes
- attached town-house style homes
- multifamily housing
- elderly housing
- assisted living and retirement housing
- home occupations
- community services and government uses
- recreational facilities and open space

In addition, small-scale office and service uses (< 5,000 square feet) should be permitted as part of a planned development as long as the scale and intensity of the uses are compatible with the residential nature of the development and they are integrated into the overall development.

Agriculture including animal husbandry should be allowed as an interim use in these areas,

Development Standards – Multifamily housing and townhouse style development should be allowed at a density of up to 10-12 units per acre, while single and two-family housing should be allowed at a density of up to 6-8 units per acre. The development standards should require that the development be designed to reflect the opportunities and constraints of the parcel and the adjacent area. Therefore, the standards should allow flexibility in how the units/lots are laid out, as long as the design is consistent with the site's characteristics. Planned developments should be required to set aside 15-25% of the gross area as open space or conservation land. New development should be designed to minimize the number of vehicular access points to existing collector or other through roads.

Moderate Density Residential Development District (MoDRD)

Objective – Allow for the development of a limited range of residential and community uses at a density of up to 6-8 units per acre in areas that are served or can be served by public sewerage and public water (see Figure 2.3). New development should be designed to minimize the number of vehicular access points to existing collector or other through roads.

Allowed Uses – The following general types of uses should be allowed within the Moderate Density Residential Development District:

- detached single family and two-family homes
- attached town-house style homes
- multifamily housing
- home occupations
- community services and government uses
- agriculture

Development Standards – Multifamily housing and townhouse style development should be allowed at a density of up to 6-8 units per acre while single and two-family housing should be allowed at a density of up to 4-6 units per acre. The development standards should allow for more dense development and smaller lots for projects that do not use existing collector or through roads for access to individual units/lots. The lot size for detached single family homes that are not part of a development should be as small as 7,500 – 10,000 square feet. Lot frontage requirements on existing collector and other through roads should be around 100 feet but should be reduced for lots that are accessed from existing local streets or streets within a development. In general, the minimum front setback should be 20-25 feet. Side and rear setbacks should be established that relate to the size and width of the lot.

Low-Moderate Density Residential Development District (LMoDRD)

Objective – Allow for the development of residential and community uses at a density of up to 2-3 units per acre in areas that are typically not served by public sewerage (see Figure 2.3). New development should be designed to minimize the number of vehicular access points to existing collector or other through roads.

Allowed Uses – The following general types of uses should be allowed within the Low-Moderate Density Residential Development District:

- detached single family and two-family homes
- attached town-house style homes
- home occupations
- community services and government uses
- agriculture

Development Standards – Single and two-family housing and townhouse style development should be allowed at a density of up to 2-3 units per acre. The development standards should allow for more dense development and smaller lots for projects that do not use existing collector or through roads for access to individual units/lots. The lot size for detached single family homes that are not part of a development should be as small as 15,000 to 20,000 square feet. Lot frontage requirements on existing collector and other through roads should be around
