

# Auburn Fire Department

FY 18 CIP Request

# Self Contained Breathing Apparatus (SCBA) Tanks

- Carry breathing air
- Required in situations where the atmosphere is incompatible with human life
- Tanks are fitted to a frame making the SCBA complete
- Replacement plan was developed in FY 15
- Year four of a five year replacement plan

# Bottle and complete SCBA unit

# Four-Wheel Drive Pickup

- Will be used as an admin and response vehicle for the Deputy Fire Chief
- Replacing a 1991 4x4 standard transmission, light-duty pick-up that is nearing the end of its serviceable life
- Vehicle being replaced is a service vehicle that carries water rescue equipment and tows the rescue boat

ENGINE 5

EMERGENCY  
911

1081

F250

# Generators

- Station generators for Center and South Main Street stations
- Loss of power at these stations for more than a few hours will result in needing to close the stations

# Ambulance Replacement

- Ambulances originally purchased were stock ambulances not intended to be dual service vehicles
- Trading now will ensure the City receives a guaranteed 40% of the original purchase cost toward trade-in
- New ambulances would have a projected life span of 10 years versus the 5-7 currently projected for existing ambulances

# Ambulance Replacement

- Differences
  - Diesel engines in place of the current gasoline
  - Allows for carrying of equipment that is necessary to meet the requirements of our dual role
  - Reduced potential for cross contamination of contaminants found on fire suppression equipment
  - Improved patient loading system intended to reduce the risk of employee or patient injury
