

City of Auburn, Recreation Department

CIP FY18 Overview

Project Background and Description

Basketball Backboard Replacement:

The Hasty Community Center currently has 6 basketball backboards in the gym, 1 main court and 2 side courts. The 4 side hoops are in need of being replaced and upgraded to keep up with the increased use from youth and adult basketball programs. Replacing older steel construction designs with lighter, adjustable glass backboards will improve the user experience and require less maintenance. Impact on Operating Costs: Lowered costs in Repairs to Buildings account. The current backboards have rims that are bent from the years of dunking and for safety reasons are in need of being replaced with Breakaway Rims. Breakaway Rims allow for a spring type system, which reduces the amount of stress and bending of the rim, along with permitting a certain amount of give that limit the risk of injury when dunking occurs.

Project Scope:

- Outline equipment to be installed and follow City Purchasing Procedures
- Work within the proposed amount of \$24,000.00 for project completion
- Facilitate equipment installation during annual shut down period late August-early September 2017

Deliverables

- Provide safe equipment for users and renters.
- Replace with a newer breakaway rim to allow for a longer life span.
