What is FEMA’s Process for Revalidating Existing LOMAs and LOMRs?

To revalidate map changes, FEMA conducts a detailed comparison of the BFEs shown on FEMA’s new FIRM and the lowest adjacent grade or lowest lot elevation of previously issued map changes. Those structures or properties that are above the BFE or are located in areas of the community that are not affected by updated flood hazard information are revalidated through a formal determination letter that is issued to the community’s Chief Executive Officer when the new FIRM becomes effective. The revalidation letter is also mailed to each community’s map repository to be kept on file and is available for public reference. Map changes that have been issued for multiple lots or structures where the determination for one or more of the lots or structures have changed cannot be automatically revalidated through the administrative process described above. To request that FEMA review such map changes (i.e., those that are not included in the revalidation letter), please submit the following to FEMA:

- A letter requesting the re-issuance (provide the case number of the LOMA to be reissued); and
- A copy of the LOMA to be reissued, if available.

FEMA will review the case file and issue a new letter reflecting its new determination.

How can I purchase flood insurance?

A policy may be purchased from any licensed property insurance agent or broker who is in good standing in the State in which the agent is licensed or through any agent representing a Write Your Own (WYO) company. Call 1-800-720-1093 or visit floodsmart.gov to find a flood insurance agent near you.

What Factors Determine Flood Insurance Premiums?

A number of factors are used to determine flood insurance premiums, including the amount of coverage purchased, the deductible, location, age, occupancy, and type of building. For buildings constructed after the effective date of the first FIRM (Post-FIRM building) that are within floodplains, the elevation of the lowest adjacent grade (the lowest ground touching the structure), or lowest floor relative to the BFE will also be used to rate the policy.

For Further Information

For any questions concerning flood hazard mapping or LOMAs, please contact the FEMA Map Information eXchange’s toll-free information line at 1-877-FEMA MAP (1-877-336-2627).

More information is available online at: http://www.fema.gov/plan/prevent/fhm/fq_genhm.shtml

The Map Information eXchange has flood hazard mapping information and products that may be reviewed online and downloaded at http://msc.fema.gov. For map orders and questions call 1-877-336-2627.

For information about floodplain management, ordinances, or map adoption policies, communities can contact their State NFIP Coordinator, Sue Baker at the Maine State Planning Office. Sue.Baker@maine.gov

For questions specifically concerning insurance, please call 1-800-427-4661 or visit http://www.floodsmart.gov.

This Fact Sheet provides background information on the National Flood Insurance Program (NFIP) which is administered by the Department of Homeland Security’s Federal Emergency Management Agency (FEMA), as well as an overview of the flood hazard mapping process underway in Androscoggin County, Maine. The county’s Flood Insurance Rate Maps (FIRMs) are being revised using the latest technologies and the most current data so residents, homeowners, business owners, and community officials may understand the local flood risk and keep people and property safe from floods.

Flood Hazard Mapping Fact Sheet

May 2, 2011

Androscoggin County, Maine

What is the NFIP?

Congress established the National Flood Insurance Program (NFIP) due to escalating costs to taxpayers for flood disaster relief. The NFIP is based on the agreement that if a community practices sound floodplain management, the Federal Government will make flood insurance available to residents in that community. FEMA maps include the Special Flood Hazard Area, which is the area that has a 1% or greater chance of flooding in any given year. Development may take place within the Special Flood Hazard Area provided that it complies with local floodplain ordinances that meet NFIP criteria.

What is a FIRM?

When FEMA maps flood hazards in a community or county, two products are produced – a Flood Insurance Study (FIS) Report and a Flood Insurance Rate Map (FIRM). An FIS is a narrative report of the community’s flood hazards that contains prior flooding information, descriptions of the flooding sources, information on flood protection measures, and a description of the hydrologic and hydraulic methods used in the study. A FIRM illustrates the extent of flood hazards in a community by depicting flood risk zones and the Special Flood Hazard Area, and is used with the FIS report to determine the floodplain development regulations that apply in each flood risk zone and who must buy flood insurance. FIRMs also depict other information including Base (1% annual chance) Flood Elevations (BFEs) or flood depths, floodways, and common physical features such as roads.
Why Are the Maps Being Updated?

All communities within Androscoggin County are being shown on a single set of Countywide FIRMs. The most significant change is that the new maps will have an updated base map that will greatly improve the accuracy of floodplain determinations. In addition, all floodplain boundaries have been updated. Floodplains with elevations have been redefined using Light Detection And Ranging (LiDAR) data. Floodplains without elevations were recalculated using the LiDAR and new engineering techniques.

With this update, we have produced a Digital Flood Insurance Rate Map (DFIRM) that will be compatible with GIS (Geographic Information Systems). The improvements in spatial accuracy provided by the new base map, and the availability of electronic floodplain information should greatly enhance the ability to use the maps for planning, permitting, and insurance applications. The digital files will be available when these maps become effective.

What Else Has Changed?

All flood elevations shown in this Flood Insurance Study are now referenced to the North American Vertical Datum of 1988 (NAVD88). In order to perform this conversion, effective elevation values from the National Geodetic Vertical Datum of 1929 (NGVD29) were adjusted by -0.57 foot. Also, BFE additions and changes occurred in the Towns of Durham, Greene, Leeds, Lisbon, Livermore, Livermore Falls, Mechanic Falls, Minot, Poland, and Turner and the Cities of Auburn and Lewiston.

How do I Find Out if a Structure or Property is Located in the Special Flood Hazard Area?

You can locate a building or a lot by consulting the FIRM, or by contacting the floodplain administrator for your community. For help interpreting a FIRM, telephone the FEMA Map Information eXchange (FMIX) at 1-877-FEMA-MAP (1-877-336-2677).

What if a Structure is Shown in a Different Flood Zone on the New Map?

The new map will not affect continuing insurance policies for a structure built in compliance with local floodplain management regulations and the flood map in effect at the time of construction. However, should the structure be substantially improved or substantially damaged (where damages or improvements reach 50% or more of the predamage market value) the entire structure will have to be brought into compliance with the floodplain requirements and the BFE in effect at the time any repairs take place.

Is There any Recourse if I Do Not Agree with the New Map?

Challenges received during the appeal period that do not address proposed BFEs are considered “protests.” Protests include, but are not limited to: challenges of floodplain boundary delineations based on more detailed topographic data; challenges of proposed regulatory floodway boundaries based on better modeling; requests that a Letter of Map Amendment (LOMA), Letter of Map Revision (LOMR), Letter of Map Revision Based on Fill (LOMR-F) be reevaluated or incorporated; base map errors; and omissions. Appeals and protests must be supported by scientific or technical data, provide proof of error, and provide sufficient data to make revisions. Certification of data by a Registered Professional Engineer or Licensed Land Surveyor may be required.

What is an Appeal?

Some flood studies result in new or revised BFEs. During the 90-day appeal period, community officials and others may object to the accuracy of the proposed BFEs. According to Federal Regulations, “The sole basis of appeal... shall be the possession of knowledge or information indicating that the elevations proposed by FEMA are scientifically or technically incorrect.” Communities should coordinate with the FEMA Boston office before submitting an appeal.

What Happens After the Appeal Period?

FEMA will issue a Letter of Final Determination and then provide the community with six months to adopt up-to-date floodplain management ordinances. If the floodplain ordinances in effect are satisfactory in accordance with State law, they can be submitted in their current form. Communities should verify this with their State NFIP Coordinator. If ordinances need to be updated, communities should seek assistance from their State NFIP Coordinator or the FEMA office in Boston. After the six-month compliance period, the new FIS and FIRM will become effective.

How do I Find Out if a Structure or Property is Located in the Special Flood Hazard Area?

You can locate a building or a lot by consulting the FIRM, or by contacting the floodplain administrator for your community. For help interpreting a FIRM, telephone the FEMA Map Information eXchange (FMIX) at 1-877-FEMA-MAP (1-877-336-2677).

What is a Protest?

Challenges received during the appeal period that do not address proposed BFEs are considered "protests." Protests include, but are not limited to: challenges of floodplain boundary delineations based on more detailed topographic data; challenges of proposed regulatory floodway boundaries based on better modeling; requests that a Letter of Map Amendment (LOMA), Letter of Map Revision (LOMR), Letter of Map Revision Based on Fill (LOMR-F) be reevaluated or incorporated; base map errors; and omissions. Appeals and protests must be supported by scientific or technical data, provide proof of error, and provide sufficient data to make revisions. Certification of data by a Registered Professional Engineer or Licensed Land Surveyor may be required.

The Mapping Process

The key steps in the mapping process are outlined below. Additionally, the points at which community officials and property owners may provide comments and express concerns with the information in the FIS report and FIRM are highlighted below.

<table>
<thead>
<tr>
<th>Scoping And Map Production</th>
<th>Community Review Period</th>
<th>Community Meeting</th>
<th>Letter of Final Determination</th>
<th>Final FIS And FIRM Effective</th>
</tr>
</thead>
<tbody>
<tr>
<td>• These tasks have been completed</td>
<td>• Preliminary FIS and FIRM issued to all communities</td>
<td>• A community meeting, open to the public, to present new FIS and FIRM to FEMA if necessary</td>
<td>• Issued by FEMA following the appeal period</td>
<td>• Six months after the Letter of Final Determination</td>
</tr>
<tr>
<td></td>
<td>• Community comments on preliminary FIS and FIRM to FEMA if necessary</td>
<td>• Federal Register notice published</td>
<td>FIS and FIRM published and distributed by FEMA</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• Floodplain information on the revised FIRM panels. Recognizing that some map changes may still be valid even though the flood hazard information on the FIRM has been updated, FEMA has established a process for revalidating such map changes.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

How Can I Request a LOMA?

To obtain a LOMA, the requester must complete a LOMA application form that is downloadable from: http://www.fema.gov/plan/prevent/fhm/dl_mt-ez.shtm. For a LOMA to be issued removing a structure from the Special Flood Hazard Area, federal regulations require that lowest adjacent grade be at or above the BFE. There is no fee for FEMA’s review of the LOMA request, but the requester of a LOMA must provide all of the information needed for a review. Elevation information certified by a licensed surveyor is often required if an elevation certificate is not available.

Will LOMAs Issued under the Old Map be Valid under the New Map?

When a new FIRM becomes effective, it may supersede previously issued LOMAs, LOMRs, and other map changes that have been issued for structures and properties on the revised FIRM panels. Recognizing that some map changes may still be valid even though the flood hazard information on the FIRM has been updated, FEMA has established a process for revalidating such map changes.
